Dr. Hailer,

I would like to apologize for my characterization of our in person meeting. I realize upon reflection, that it came across as flippant and short. I in no way meant to characterize it as you waved a piece of paper under my nose, didn't let me look at it, and we ended the meeting. You did, and I appreciate the gesture, talk to me about a study that was underway, there was some discussion back in forth between us and others in the room about what it actually meant and how to put it into context. It was probably the first time I had heard or seen meconium data in a scientific context. Unfortunately, we did not continue that conversation beyond that meeting, not due to anyones fault. Without seeing it in the context of the paper I was not aware or able to grasp the message you were trying to convey. Again, Im sorry for how I characterized it during our call, I will better strive to be more thorough in describing our meeting in the future.

Charlie
